

ROLLER DRESSERS

These dressers are as good as multi diamond tool in which the row of diamonds are fitted into the circumference of roller bodies at a regular distance apart. After one row of diamond become flat/worn, by turning the roller further new tips are used for dressing, thus ensuring clean equal dressing. A special process is used to select the needle diamonds and natural diamonds for these types of roller dressers. Relatively small diamonds are used. These roller dressers are sufficient to cover the whole range of wheel dressing operation.

To get the maximum tool life

Use plenty of coolant to increase the tool life.

Depth of cut should not exceed more than
